

High Temperature Glass Fibre Media

M5 Specialist Filters

Cost effective and durable, our Glass Fibre Media products have been specifically designed to remove contaminants from air at high temperatures. They are used extensively in the final filtration of air in paint and drying units.

For first class final filtration, choose Glass Fibre Media from CFP.

THE KEY BENEFITS

- 1 Versatile**
Available as rolls or pads, as a panel filter or with changing frame and in glass fibre or synthetic materials for all your painting and drying needs.
- 2 Durable**
Temperature and humidity resistant, High Temperature Glass Fibre Media provide effective filtration in the most challenging paint and drying environments.
- 3 Environmentally-friendly**
With no silicone or other lacquer harming substances, High Temperature Glass Fibre Media are environmentally friendly and easy to dispose of.

**Painting & drying
technology**
